# SECURITY AUDIT REPORT

**BIDEN ARMY** 

### **TOKEN OVERVIEW**

### **Risk Findings**

Severity	Found	
High	1	
Medium	0	
Low	4	
Informational	0	

### **Centralization Risks**

Owner Privileges	Description
Can Owner Set Taxes >25%?	Not Detected
Owner needs to enable trading?	Yes, owner needs to enable trades
Can Owner Disable Trades ?	Not Detected
Can Owner Mint ?	Not Detected
Can Owner Blacklist ?	Not Detected
Can Owner set Max Wallet amount?	Not Detected
Can Owner Set Max TX amount?	Not Detected

17	About Expelee

# **OVERVIEW**

The Expelee team has performed a line-by-line manual analysis and automated review of the smart contract. The smart contract was analysed mainly for common smart contract vulnerabilities, exploits, and manipulation hacks. According to the smart contract audit:

Audit Result	Passed with High Risk
KYC Verification	-
Audit Date	3 June 2023

## **CONTRACT DETAILS**

Token Name: Biden Army

Symbol: BARMY

**Network: Binance Smart Chain** 

Language: Solidity

Contract Address: 0x41D05F16f5E18CaE459296A120B0F4Cd2cfA8e42

Total Supply: 100000000000000

Owner's Wallet: 0x69346232a62ead31e4ef9fe15e3774887a012c74

Deployer's Wallet: 0x0a6e1bad6893e8da5f0c957ea915ccda0c3e811a

**Testnet Link:**

# AUDIT METHODOLOGY

### **Audit Details**

Our comprehensive audit report provides a full overview of the audited system's architecture, smart contract codebase, and details on any vulnerabilities found within the system.

### **Audit Goals**

The audit goal is to ensure that the project is built to protect investors and users, preventing potentially catastrophic vulnerabilities after launch, that lead to scams and rugpulls.

### **Code Quality**

Our analysis includes both automatic tests and manual code analysis for the following aspects:

- Exploits
- Back-doors
- Vulnerability
- Accuracy
- Readability

### **Tools**

- DE
- Open Zeppelin
- Code Analyzer
- Solidity Code
- Compiler
- Hardhat

# VULNERABILITY CHECKS

Design Logic	Passed
Compiler warnings	Passed
Private user data leaks	Passed
Timestamps dependence	Passed
Integer overflow and underflow	Passed
Race conditions & reentrancy. Cross-function race conditions	Passed
Possible delays in data delivery	Passed
Oracle calls	Passed
Front Running	Passed
DoS with Revert	Passed
DoS with block gas limit	Passed
Methods execution permissions	Passed
Economy model	Passed
Impact of the exchange rate on the logic	Passed
Malicious event log	Passed
Scoping and declarations	Passed
Uninitialized storage pointers	Passed
Arithmetic accuracy	Passed
Cross-function race conditions	Passed
Safe Zepplin module	Passed

# RISK CLASSIFICATION

When performing smart contract audits, our specialists look for known vulnerabilities as well as logical and acces control issues within the code. The exploitation of these issues by malicious actors may cause serious financial damage to projects that failed to get an audit in time. We categorize these vulnerabilities by the following levels:

### **High Risk**

Issues on this level are critical to the smart contract's performance/functionality and should be fixed before moving to a live environment.

### **Medium Risk**

Issues on this level are critical to the smart contract's performance/functionality and should be fixed before moving to a live environment.

### **Low Risk**

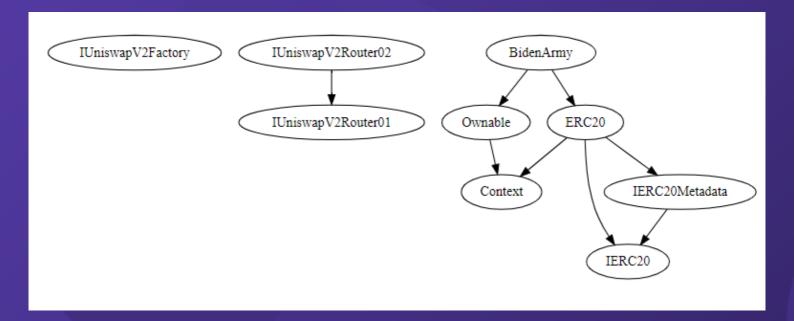

Issues on this level are minor details and warning that can remain unfixed.

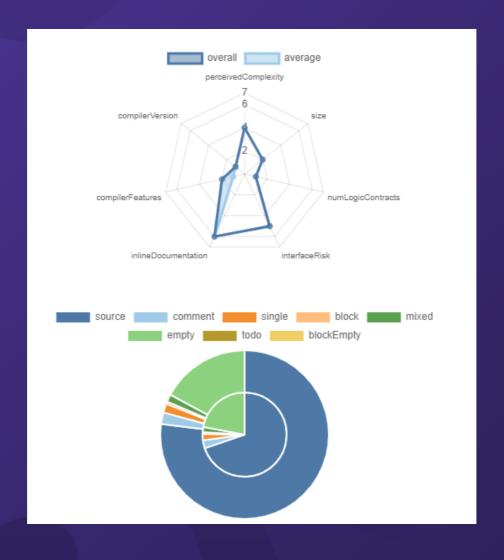

### **Informational**

Issues on this level are minor details and warning that can remain unfixed.

# **INHERITANCE TREES**

### **FUNCTION DETAILS**

```
**BidenArmy** | Implementation | ERC20, Ownable |||
L | <Constructor> | Public | | • | ERC20 |
L | <Receive Ether> | External ! | 💵 | NO !
 enableTrading | Public | |
 | claimStuckTokens | External | | • | onlyOwner |
L | excludeFromFees | External | | • | onlyOwner |
 | isExcludedFromFees | Public ! |
L | setBuyFee | External ! | • | onlyOwner |
L | setSellFee | External ! | •
                                 onlyOwner
 | changeTaxWallet | External | |
   _transfer | Internal 🔒 |
 | changeTaxCurrency | External !
                                    onlyOwner |
L | setSwapTokensAtAmount | External ! | ● | onlyOwner |
| setSwapWithLimit | External | | • | onlyOwner |
 | swap | Private 🔐 | 🛑
   swapAndSendForTax | Private 🔐 |
```

### **MANUAL REVIEW**

### **Severity Criteria**

Expelee assesses the severity of disclosed vulnerabilities according to methodology based on OWASP standarts.

Vulnerabilities are dividend into three primary risk categroies:

High

Medium

Low

High-level considerations for vulnerabilities span the following key areas when conducting assessments:

- Malicious input handling
- Escalation of privileges
- Arithmetic
- Gas use

Overall Risk Severity							
Impact	HIGH	Medium	High	Critical			
	MEDIUM	Low	Medium	High			
	LOW	Note	Low	Medium			
		LOW	MEDIUM	HIGH			
	Likelihood						

### **HIGH RISK FINDING**

### Trade must be enabled by the owner

Risk : Centralisation

Severity: High

#### **Overview**

Owner must enable trading to enable public to trade their tokens, otherwise no one would be able to buy /sell their tokens except whitelisted wallets.

```
function enableTrading() public onlyOwner{
    require(!tradingEnabled, "Trading is already enabled");
    tradingEnabled = true;
}
```

#### Recommendation

To mitigate this issue you should enable trading before presale or transfer ownership to safu dev for initial days after presale.

#### Owner can exclude account from fees

### **Severity: Low**

#### **Overview**

Excludes/Includes an address from the collection of fees

```
function excludeFromFees(address account1, bool excluded1) external onlyOwner{{
    require(_isExcludedFromFees[account1] ≠ excluded1, "Account is already the value of 'excluded'");
    _isExcludedFromFees[account1] = excluded1;
    emit ExcludeFromFees(account1, excluded1);
}
```

#### Recommendation

It is recommended to add additional access control measures, such as multi-factor authentication or time-based restrictions, to limit the number of authorized users who can call these functions. The contract owner account is well secured and only accessible by authorized parties.

### Owner can change fees 2% max

### **Severity: Low**

#### **Overview**

Functions that allows the owner of the contract to update the buy/sell fees of the contract. These functions assumes that the input parameters are valid and do not exceed the maximum limit of 2% for buy fees and maximum limit of 2% for sell fees. Fees can only be decreased.

```
function setBuyFee(uint256 _buyFee1) external onlyOwner {
    require(_buyFee1 < buyFee, "Buy Fee can only be decreased");
    buyFee = _buyFee1;
    emit BuyFeeUpdated(buyFee);
}

Oreferences | Control flow graph | 8b4cee08 | ftrace | funcSig
function setSellFee(uint256 _sellFee1) external onlyOwner {
    require(_sellFee1 < sellFee1) external onlyOwner {
    sellFee = _sellFee1;
    emit SellFeeUpdated(sellFee);
}</pre>
```

#### Recommendation

It is recommended to add additional access control measures, such as multi-factor authentication or time-based restrictions, to limit the number of authorized users who can call these functions.

### Owner can change swap setting

### **Severity: Low**

#### **Overview**

**setSwapTokensAtAmount** function allows the owner of the contract to update the value of **swapTokensAtAmount**.

#### Recommendation

If the threshold is set too low, it could result in frequent and unnecessary swaps, which would increase gas fees and potentially lead to losses due to slippage. On the other hand, if the threshold is set too high, it could result in liquidity being insufficient to handle large trades, which could negatively impact the token price and liquidity pool. Be ensure that the contract owner account is well secured and only accessible by authorized parties.

### Owner can claim stuck tokens except native token

### **Severity: Low**

### **Overview**

**claimStuckTokens** allow the contract owner to withdraw locked or stuck ETH and ERC20 tokens from the contract. The functions are properly restricted to only be executed by the contract owner.

#### Recommendation

While the functions are currently restricted to only be called by the contract owner, it is recommended to consider implementing a more robust access control mechanism.

### **ABOUT EXPELEE**

Expelee is a product-based aspirational Web3 start-up.
Coping up with numerous solutions for blockchain security and constructing a Web3 ecosystem from deal making platform to developer hosting open platform, while also developing our own commercial and sustainable blockchain.
