SMART CONTRACT AUDIT OF

Bella Inu Fair Launch

Contract Address

0x608e5F1f5d4d7b7C64a813Ac33A46aDb2c612404

www.expelee.com Page 1 |

Audit Summary

Expelee team has performed a line-by-line manual analysis and automated review of the smart contract. The smart contract was analysed mainly for common smart contract vulnerabilities, exploits, and manipulation hacks. According to the smart contract audit:

Audit Result: PASSED

Ownership: NOT RENOUNCED

KYC Verification: Not Done

Audit Date: 31/07/2022

Audit Team: EXPELEE

Be aware that smart contracts deployed on the blockchain aren't resistant to internal exploit, external vulnerability, or hack. For a detailed understanding of risk severity, source code vulnerability, functional hack, and audit disclaimer, kindly refer to the audit.

DISCLAMER

All the content provided in this document is for general information only and should not be used as financial advice or a reason to buy any investment. Team provides no guarantees against the sale of team tokens or the removal of liquidity by the project audited in this document.

Always Do your own research and protect yourselves from being scammed. The Expelee team has audited this project for general information and only expresses their opinion based on similar projects and checks from popular diagnostic tools.

Under no circumstances did Expelee receive a payment to manipulate those results or change the awarding badge that we will be adding in our website. Always Do your own research and protect yourselves from scams.

This document should not be presented as a reason to buy or not buy any particular token. The Expelee team disclaims any liability for the resulting losses.

Audit Methodology

The scope of this report is to audit the smart contract source code. We have scanned the contract and reviewed the project for common vulnerabilities, exploits, hacks, and back-doors. Below is the list of commonly known smart contract vulnerabilities, exploits, and hacks:

Category

Smart Contract

Vulnerabilities

- Unhandled Exceptions
- Transaction Order Dependency
- Integer Overflow
- Unrestricted Action
- Incorrect Inheritance Order
- Typographical Errors
- Requirement Violation

Source Code Review

- Gas Limit and Loops
- Deployment Consistency
- Repository Consistency
- Data Consistency
- Token Supply Manipulation

Functional Assessment

- Operations Trail & Event Generation
- Assets Manipulation
- Liquidity Access

Vulnerability Checklist

Νō	Description.	Result
1	Compiler warnings.	Passed
2	Race conditions and Re-entrancy. Cross-function raceconditions.	Passed
3	Possible delays in data delivery.	Passed
4	Oracle calls.	Passed
5	Front running.	Passed
6	Timestamp dependence.	Passed
7	Integer Overflow and Underflow.	Passed
8	DoS with Revert.	Passed
9	DoS with block gas limit.	Passed
10	Methods execution permissions.	Passed
11	Economy model.	Passed
12	The impact of the exchange rate on the logic.	Passed
13	Private user data leaks.	Passed
14	Malicious Event log.	Passed
15	Scoping and Declarations.	Passed
16	Uninitialized storage pointers.	Passed
17	Arithmetic accuracy.	Passed
18	Design Logic.	Passed
19	Cross-function race conditions.	Passed
20	Safe Zeppelin module.	Passed
21	Fallback function security.	Passed

Manual Audit

- Low-Risk
- 3 low-risk code issues found
- Medium-Risk
- 0 medium-risk code issues found
 - High-Risk
 - 0 high-risk code issues found

IUniswapV2Pair	27	ERC20, ERC2612	∞ Minting	l No	l l
			Approve Race Cond.	I	1
1				I	l l
SafeMathInt	7			l No	l l
SafeMathUint	1 1			l No	l l
IterableMapping	6			l No	l l
BABYTOKENDividendTracker	71	ERC20	No Minting	Yes	Tokens interaction
1			Approve Race Cond.	l	Upgradeable
1				I	l l
BABYTOKEN	72	ERC20	No Minting	Yes	Receive ETH
			Approve Race Cond.	I	Send ETH
				I	Tokens interaction

www.expelee.com | Page 9 |

1) Functions that send Ether to arbitrary destinations

Unprotected call to a function sending Ether to an arbitrary address.

```
function addLiquidity(uint256 tokenAmount, uint256 ethAmount) private {
    // approve token transfer to cover all possible scenarios
    _approve(address(this), address(uniswapV2Router), tokenAmount);

    // add the liquidity
    uniswapV2Router.addLiquidityETH{value: ethAmount}(
        address(this),
        tokenAmount,
        0, // slippage is unavoidable
        0, // slippage is unavoidable
        address(0),
        block.timestamp
    );
}
```

Recommendation

Ensure that an arbitrary user cannot withdraw unauthorized funds.

www.expelee.com Page 10 |

2) Reentrancy vulnerabilities

Detection of the reentrancy bug. Do not report reentrancies that don't involve Ether (see reentrancy-no-eth)

```
uniswapV2Router.swapExactTokensForTokensSupportingFeeOnTransferTokens(
    tokenAmount,
    0,
    path,
    address(this),
    block.timestamp
);
```

Recommendation

Apply the check-effects-interactions pattern.

www.expelee.com | Page 11 |

3) Unchecked transfer

The return value of an external transfer/transferFrom call is not checked.

```
function swapAndSendToFee(uint256 tokens) private {

uint256 initialCAKEBalance = IERC20(rewardToken).balanceOf(
    address(this)
);

swapTokensForCake(tokens);
uint256 newBalance = (IERC20(rewardToken).balanceOf(address(this))).sub(
    initialCAKEBalance
);
IERC20(rewardToken).transfer(_marketingWalletAddress, newBalance);
}
```

Recommendation

Use SafeERC20, or ensure that the transfer/transferFrom return value is checked.

Manual Audit (Contract Function)

```
contract BABYTOKENDividendTracker is OwnableUpgradeable, DividendPayingToken {
   using SafeMath for uint256;
   using SafeMathInt for int256;
   using IterableMapping for IterableMapping.Map;
   IterableMapping.Map private tokenHoldersMap;
   uint256 public lastProcessedIndex;
   mapping(address => bool) public excludedFromDividends;
   mapping(address => uint256) public lastClaimTimes;
   uint256 public claimWait;
   uint256 public minimumTokenBalanceForDividends;
   event ExcludeFromDividends(address indexed account);
   event ClaimWaitUpdated(uint256 indexed newValue, uint256 indexed oldValue);
   event Claim(
       address indexed account,
       uint256 amount,
       bool indexed automatic
   );
   function initialize(
       address rewardToken ,
        uint256 minimumTokenBalanceForDividends
    ) external initializer {
        DividendPayingToken.__DividendPayingToken_init(
            rewardToken_,
            "DIVIDEND_TRACKER",
            "DIVIDEND TRACKER"
        );
       claimWait = 3600;
       minimumTokenBalanceForDividends = minimumTokenBalanceForDividends_;
   function transfer(
       address,
       address,
        uint256
    ) internal pure override {
        require(false, "Dividend_Tracker: No transfers allowed");
   }
```

Important Points To Consider

- ✓ Verified contract source
- ✓ Token is sellable (not a honeypot) at this time
- X Ownership renounced or source does not contain an owner contract
 - X Source does not contain a fee modifier
 - X Buy fee is less than 5%(7%)
 - X Sell fee is less than 5%(21%)
- ✓ Owner/creator wallet contains less than 5% of circulating token supply (0%)
- ✓ All other holders possess less than 5% of circulating token supply.

Source contains a mint function

About Expelee

Expelee is a community driven organisation dedicated to fostering an antirug movement. We're here to keep investment safe from fraudsters. We've encountered several rug pulls and know how it feels to be duped, which is why we don't want anybody else to go through the same experience. We are here to raise awareness through our services so that the future of cryptocurrency can be rug-free.

The auditing process focuses to the following considerations with collaboration of an expert team:

- Functionality test of the Smart Contract to determine if proper logic has been followed throughout the whole process.
- Manually detailed examination of the code line by line by experts.
- Live test by multiple clients using Test net.
- Analysing failure preparations to check how the Smart
- Contract performs in case of any bugs and vulnerabilities.
- Checking whether all the libraries used in the code are on the latest version.
- Analysing the security of the on-chain data.
