SMART CONTRACT AUDIT OF

DOGE FOOTBALL

Contract Address

0x002DB1756DF9452d7a3224D46bE2CA4D2Dce11A3

Audit Summary

Expelee team has performed a line-by-line manual analysis and automated review of the smart contract. The smart contract was analysed mainly for common smart contract vulnerabilities, exploits, and manipulation hacks. According to the smart contract audit:

Audit Result: PASSED

KYC Verification: NOT DONE

Audit Date: 23/08/2022

Audit Team: EXPELEE

Be aware that smart contracts deployed on the blockchain aren't resistant to internal exploit, external vulnerability, or hack. For a detailed understanding of risk severity, source code vulnerability, functional hack, and audit disclaimer, kindly refer to the audit.

DISCLAMER

All the content provided in this document is for general information only and should not be used as financial advice or a reason to buy any investment. Team provides no guarantees against the sale of team tokens or the removal of liquidity by the project audited in this document.

Always Do your own research and protect yourselves from being scammed. The Expelee team has audited this project for general information and only expresses their opinion based on similar projects and checks from popular diagnostic tools.

Under no circumstances did Expelee receive a payment to manipulate those results or change the awarding badge that we will be adding in our website. Always Do your own research and protect yourselves from scams.

This document should not be presented as a reason to buy or not buy any particular token. The Expelee team disclaims any liability for the resulting losses.

Audit Methodology

The scope of this report is to audit the smart contract source code. We have scanned the contract and reviewed the project for common vulnerabilities, exploits, hacks, and back-doors. Below is the list of commonly known smart contract vulnerabilities, exploits, and hacks:

Category

- Unhandled Exceptions

- Transaction Order Dependency

Smart Contract Vulnerabilities

- Integer Overflow

- Unrestricted Action

- Incorrect Inheritance Order

- Typographical Errors

- Requirement Violation

Source Code Review

- Gas Limit and Loops

- Deployment Consistency

- Repository Consistency

- Data Consistency

- Token Supply Manipulation

Functional Assessment - Operations Trail & Event Generation

- Assets Manipulation

- Liquidity Access

Vulnerability Checklist

Νō	Description.	Result		
1	Compiler warnings.	Passed		
2	Race conditions and Re-entrancy. Cross-function raceconditions.	Passed		
3	Possible delays in data delivery.	Passed		
4	Oracle calls.	Passed		
5	Front running.	Passed		
6	Timestamp dependence.	Passed		
7	Integer Overflow and Underflow.	Passed		
8	DoS with Revert.	Passed		
9	DoS with block gas limit.	Passed		
10	Methods execution permissions.	Passed		
11	Economy model.	Passed		
12	The impact of the exchange rate on the logic.	Passed		
13	Private user data leaks.			
14	Malicious Event log.	Passed		
15	Scoping and Declarations.	Passed		
16	Uninitialized storage pointers.	Passed		
17	Arithmetic accuracy.	Passed		
18	Design Logic.	Passed		
19	Cross-function race conditions.	Passed		
20	Safe Zeppelin module.	Passed		
21	Fallback function security.	Passed

Manual Audit

- Informational-Risk RISK LEVEL(0-2)
- 2 informational risk code issues found
 - Low-Risk RISK LEVEL(2-4)
 - O low-risk code issues found
 - Medium-Risk RISK LEVEL(4-7)
- 0 medium-risk code issues found
 - High-Risk RISK LEVEL(7-10)
 - 0 high-risk code issues found

INFORMATIONAL RISK

1) Conformance to Solidity naming conventions

Solidity defines a naming convention that should be followed.

```
Variable BaseToken._symbol (sample.sol#782) is not in mixedCase
Variable BaseToken._decimals (sample.sol#783) is not in mixedCase
Variable BaseToken._totalSupply (sample.sol#784) is not in mixedCase
Parameter MainToken.initSpecialAddresses(address,address,address)._lpAddress (sample.sol#956) is
not in mixedCase
Parameter MainToken.initSpecialAddresses(address,address,address)._treasuryAddress
(sample.sol#957) is not in mixedCase
Parameter MainToken.initSpecialAddresses(address,address,address)._marketingAddress
(sample.sol#958) is not in mixedCase
Parameter MainToken.burnDead(uint256)._value (sample.sol#1027) is not in mixedCase
Parameter MainToken.burnSupply(uint256)._value (sample.sol#1032) is not in mixedCase
```

Recommendation

Follow the solidity naming covention

www.expelee.com | Page 10 |

2) Public Functions that could be declared externally

Public functions that are never called by the contract should be declared external to save gas.

```
function initSpecialAddresses(
    address _lpAddress,
    address _treasuryAddress,
    address _marketingAddress
) public onlyOwner {
    // Set new address
    lpAddress = _lpAddress;
    marketingAddress = _marketingAddress;
    treasuryAddress = _treasuryAddress
```

Recommendation

Use the external attribute for functions never called from the contract.

About Expelee

Expelee is a community driven organisation dedicated to fostering an antirug movement. We're here to keep investment safe from fraudsters. We've encountered several rug pulls and know how it feels to be duped, which is why we don't want anybody else to go through the same experience. We are here to raise awareness through our services so that the future of cryptocurrency can be rug-free.

The auditing process focuses to the following considerations with collaboration of an expert team:

- Functionality test of the Smart Contract to determine if proper logic has been followed throughout the whole process.
- Manually detailed examination of the code line by line by experts.
- Live test by multiple clients using Test net.
- Analysing failure preparations to check how the Smart
- Contract performs in case of any bugs and vulnerabilities.
- Checking whether all the libraries used in the code are on the latest version.
- Analysing the security of the on-chain data.
