# **OVERVIEW**

The Expelee team has performed a line-by-line manual analysis and automated review of the smart contract. The smart contract was analysed mainly for common smart contract vulnerabilities, exploits, and manipulation hacks. According to the smart contract audit:

Audit Result	Passed
KYC Verification	No
Audit Date	7 May 2023

### **CONTRACT DETAILS**

Token Name: BasedPepeEth

**Symbol: PERB** 

**Network: ERC** 

Language: Solidity

Total Supply: 1,000,000,000,000

Contract SHA-256 Checksum: 474c2309a12cf894c6a821ae4fad64378ef1efc4

Owner's Wallet: 0xf1070299a8c2E538ab7F6993e0A6e9E66d0d5d6A

Deployer's Wallet: 0xa07la9D906cClFDaC5685d62257A26FF3Cl682cd

**Testnet:** 

https://testnet.bscscan.com/token/0xEFAE1EdAFC6926cA2D 281Aa810074ac502f6DDd7#readContract

Token:

0x06913443195E8C1033883d575aa30faF5e5f2CBf

### **OWNER PRIVILEGES**

- contract owner is not able to change buy/sell/transfer fee more than 12%
- Contract owner is not able to blacklist an arbitrary wallet
- Contract owner is not able to set limit for buy/sell/transfer/holding amounts
- Contract owner is not able to mint new tokens
- Contract owner is not able to disable trades

## AUDIT METHODOLOGY

#### **Audit Details**

Our comprehensive audit report provides a full overview of the audited system's architecture, smart contract codebase, and details on any vulnerabilities found within the system.

#### **Audit Goals**

The audit goal is to ensure that the project is built to protect investors and users, preventing potentially catastrophic vulnerabilities after launch, that lead to scams and rugpulls.

#### **Code Quality**

Our analysis includes both automatic tests and manual code analysis for the following aspects:

- Exploits
- Back-doors
- Vulnerability
- Accuracy
- Readability

#### **Tools**

- DE
- Open Zeppelin
- Code Analyzer
- Solidity Code
- Compiler
- Hardhat

# VULNERABILITY CHECKS

Design Logic	Passed
Compiler warnings	Passed
Private user data leaks	Passed
Timestamps dependence	Passed
Integer overflow and underflow	Passed
Race conditions & reentrancy. Cross-function race conditions	Passed
Possible delays in data delivery	Passed
Oracle calls	Passed
Front Running	Passed
DoS with Revert	Passed
DoS with block gas limit	Passed
Methods execution permissions	Passed
Economy model	Passed
Impact of the exchange rate on the logic	Passed
Malicious event log	Passed
Scoping and declarations	Passed
Uninitialized storage pointers	Passed
Arithmetic accuracy	Passed
Cross-function race conditions	Passed
Safe Zepplin module	Passed

## RISK CLASSIFICATION

When performing smart contract audits, our specialists look for known vulnerabilities as well as logical and acces control issues within the code. The exploitation of these issues by malicious actors may cause serious financial damage to projects that failed to get an audit in time. We categorize these vulnerabilities by the following levels:

#### **High Risk**

Issues on this level are critical to the smart contract's performance/functionality and should be fixed before moving to a live environment.

#### **Medium Risk**

Issues on this level are critical to the smart contract's performance/functionality and should be fixed before moving to a live environment.

#### **Low Risk**

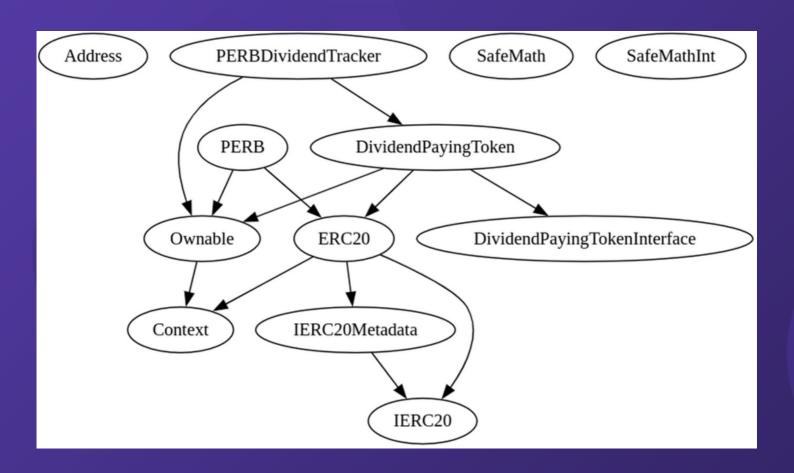

Issues on this level are minor details and warning that can remain unfixed.

#### **Informational**

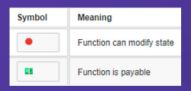

Issues on this level are minor details and warning that can remain unfixed.

### **INHERITANCE TREES**

### **MANUAL REVIEW**

#### **Severity Criteria**

Expelee assesses the severity of disclosed vulnerabilities according to methodology based on OWASP standarts.

Vulnerabilities are dividend into three primary risk categroies:

High

Medium

Low

High-level considerations for vulnerabilities span the following key areas when conducting assessments:

- Malicious input handling
- Escalation of privileges
- Arithmetic
- Gas use

Overall Risk Severity						
	HIGH	Medium	High	Critical		
Impact	MEDIUM	Low	Medium	High		
Impact	LOW	Note	Low	Medium		
		LOW	MEDIUM	HIGH		
	Likelihood					

# **FINDINGS**

Findings	Severity	Found
High Risk	High	1
Medium Risk	Medium	0
Low Risk	<ul><li>Low</li></ul>	0
Suggestion & discussion	Informational	0
Gas Optimizations	● Gas Opt.	0

### **HIGH RISK FINDING**

**Category: Centralization** 

Subject: Owner is able to change dividend tracker

Overview: Contract owner is able to change current

dividend tracker. New dividend tracker may not be

compatible with the current implementation

function setDividendTracker(address \_newTracker) public
onlyOwner{
distributor = IDividendDistributor(\_newTracker);
distributorAddress = \_newTracker;
}

#### **Suggestion**

Ensure that new dividend tracker is compatible with the current implementation of dividend tracker

#### **Allevation:**

contract is using PEPE token as rewards, we added this feature to be able to change dividend tracker if any issues happened. It should be noted that a malicious dividend tracker would disable trades also for the owner of the contract which has no profits to be exploited

**Issue Status: Resolved** 

### **ABOUT EXPELEE**

Expelee is a product-based aspirational Web3 start-up.
Coping up with numerous solutions for blockchain security and constructing a Web3 ecosystem from deal making platform to developer hosting open platform, while also developing our own commercial and sustainable blockchain.
